

Three questions. Room to read.

Working native Elementor tabs with fictional product copy.

DESKTOP CAPTURE / CHROME AT 1400 PX

INDEPENDENT ELEMENTOR SAMPLE

Product questions, with room to read.

Three working tabs with fictional copy. A component example, not a completed client repair.

What is it? How it works Who it's for

A clear introduction

This fictional example keeps the product introduction in a readable column. Each question has its own answer, so longer copy has room without crowding the other questions.

Native Elementor Tabs widget · Fictional copy · Local test fixture

Measured layout

800px maximum section width
40px top and bottom padding

19px semibold titles
2px black active underline
24px above the answer

IMPLEMENTED AND CHECKED

Three distinct questions open their matching answers. The active title is black; inactive titles are gray. The existing widget handles tab behavior, with styling scoped to this sample. Left/right arrows and Enter select the expected answer.

How I would apply this to your section

First confirm your page and current tab widget, map the three correct answers, then adapt the section in a safe copy. Check the agreed layouts and provide the change and rollback notes. The existing product template still needs inspection before the repair scope is confirmed.

Checked at narrow widths.

A local browser test with visible evidence and defined limits.

390 PX BROWSER CAPTURE

INDEPENDENT ELEMENTOR SAMPLE

Product questions, with room to read.

Three working tabs with fictional copy. A component example, not a completed client repair.

What is it? How it works **Who it's for**

Help people decide

The final answer can explain who the product suits and any relevant limitations. This is placeholder copy for a layout test; it makes no claims about a real product.

Native Elementor Tabs widget · Fictional copy · Local test fixture

Seven check groups passed

- Exactly three uniquely titled tabs.
- Each tab opens its own answer; only one answer is visible.
- Arrow-key navigation and Enter activation.
- Desktop width, spacing, title styling and active underline.
- All tabs usable with no horizontal overflow at 390px.
- All tabs usable with no horizontal overflow at 320px.
- No uncaught JavaScript errors during these interactions.

Test environment

WordPress 7.1 / PHP 8.3.33
Elementor 4.2.4, native Nested Tabs
Chrome 152, isolated local Playground

Evidence limits

This is a fictional component sample, not a client repair. Your widget and theme are unknown. It does not test a WooCommerce template, production hosting, conversion results, physical phones or assistive technology.

Reproducible source and machine-readable verification results are retained with the sample.
